

Master Technical Architecture & Engineering Handoff Manual

A Complete Zero-to-Production Reference for Developers, System Administrators & AI Agents

Target Enterprise: Dolly Toys and Kids Wear	Store Location: Agra Road, Dhule, Maharashtra
Store Foundation: 17 February 2002 (24+ Years of Trust)	Primary Contact: +91 7972558842 (Somesh Bang)
Application Core: FastAPI (Python 3.14) + React 18 + Vite + TS	Database Engines: PostgreSQL 16 Enterprise + Dual SQLite Fallback
Scale Capacity: 10,00,000+ Products / 50+ Years Data Longevity	Deployment Model: Native Windows Desktop App (.exe) + Portable Installer

1. System Architecture & High-Performance Paradigm

Dolly POS is engineered as a zero-latency, high-reliability retail management suite designed specifically for Indian apparel and toy retailers. It employs an asynchronous **Dual-Engine Architecture** that guarantees 100% offline operational independence, instant barcode scanning (<5ms), and seamless scalability over a 50-year horizon.

- **Frontend Client Layer:** Single Page Application (SPA) built with React 18, TypeScript, Tailwind CSS, Lucide Icons, and Zustand state management. Bundled and minified via Vite 5.
- **Backend REST Core:** High-speed asynchronous ASGI server powered by FastAPI, Uvicorn, and SQLAlchemy 2.0 ORM. All business rules (surcharges, taxes, roundoffs) execute server-side.
- **Desktop Packaging Layer:** PyWebView + Microsoft Edge Chromium (WebView2) embedded runtime. Runs as a pure native Windows executable (DollyPOS.exe) without requiring Node.js or Chrome browser.
- **Database Dual Engine:** Default connection to PostgreSQL 16 with automated fallback to SQLite 3 WAL mode. Zero configuration required for multi-terminal or single-laptop deployments.
- **Perpetual Timezone Alignment:** Strict IST (Indian Standard Time, UTC+05:30) synchronization across all daily sales cuts, financial year books, invoice timestamps, and festival trackers.

2. Complete Repository Directory & Module Map

The codebase is strictly structured into specialized layers for clean separation of concerns:

Directory / File	Layer	Purpose & Key Responsibilities
backend/desktop_app.py	Launcher	Starts background Uvicorn server on localhost:8000, initializes WebView2 window, and handles graceful app exit.
backend/app/main.py	Core API	FastAPI application endpoint, CORS config, startup database migrations, default seeds (Admin, Categories, Settings).
backend/app/core/database.py	Data Layer	Dual-engine connection factory (PostgreSQL / SQLite WAL fallback) and session lifecycle management.

backend/app/core/timezone.py	Time Engine	IST timezone utilities, start-of-day/month/year boundary generators, and perpetual leap-year calendar calculators.
backend/app/models/	ORM Schema	23 SQLAlchemy database entity models: Products, Invoices, Customers, Vendors, Purchases, Returns, Settings, etc.
backend/app/api/	Endpoints	REST API routers: billing, inventory, customers, vendors, purchases, reports, procurement, backup, settings.
backend/app/services/	Business Logic	Specialized engines: analytics_service, backup_service, maintenance_service, pdf_service, printer_service.
frontend/src/pages/	UI Views	Primary workflow pages: Billing [F1], Inventory [F2], Customers [F4], Vendors, Reports [F8], Procurement [F9], Settings, Barcodes.
frontend/src/components/	UI Components	Reusable widgets: BarcodeScannerInput, ThermalReceiptView, ExtraChargesBreakdown, CartTable, SearchModals.
frontend/src/utils/	Client Logic	Helpers: extraCharges.ts (5-rule MDR engine), whatsappFormatter.ts, formatters.ts (INR Lakhs currency).
dist_installer/	Packaging	Standalone 1-click Windows offline installer package (DollyPOS_Setup_v1.0.0.exe) and setup scripts.
docs/	Manuals	Architecture documentation, Database Schema PDF, TSC Printer Calibration guides, and Setup manuals.

3. Database Schema Reference & 50-Year Longevity

The database is architected with **23 relational tables** using 64-bit BigInteger primary keys, strict Foreign Key cascading constraints, and optimized B-Tree and Trigram indexes to support over **10,00,000+ catalog SKUs** and **5,00,00,000+ invoices** without degradation:

Domain	Database Tables	Primary Key & Indexes	Cascading & Integrity Rules
Store & Auth	store_settings users	PK: id (INT) IDX: username UNIQUE	Owner (admin) protected against deletion. Store settings preserved during backup restore.
Catalog & Stock	categories subcategories products product_price_history	PK: id (BIGINT) IDX: barcode UNIQUE IDX: sku UNIQUE IDX: (category_id, subcategory_id)	Category deletion cascades to Subcategories. Product deletion cascades to Price History and Purchase Items. Inventory restocked on bill cancellation.
POS Billing	invoices invoice_items payments	PK: id (BIGINT) IDX: bill_number UNIQUE IDX: created_at DESC IDX: customer_phone	Invoice deletion cascades to Items and Payments. Roundoff calculated to nearest rupee. MDR & charges broken down per payment mode.
Khata Ledger	customers customer_ledgers	PK: id (BIGINT) IDX: phone UNIQUE IDX: customer_id	Customer deletion cascades to ledger entries. Credit balance recomputed automatically upon payment or return order.
Vendors & Buy	vendors vendor_ledgers purchases purchase_items	PK: id (BIGINT) IDX: vendor_code UNIQUE IDX: purchase_number UNIQUE	Vendor deletion cascades to Purchases and Ledgers. Stock automatically incremented when status moves to RECEIVED.

Returns & Scrap	return_orders return_items	PK: id (BIGINT) IDX: return_number UNIQUE	Defective items routed to damaged pool; restockable items returned to saleable inventory pool.
Procurement & Demand	procurement_notes lost_demands	PK: id (BIGINT) IDX: status, created_at	Hotkeyed [F10] Quick Notes and Lost Demand items persisted cleanly for market buying trips.
Financials & WhatsApp	expenses whatsapp_logs	PK: id (BIGINT) IDX: expense_date, bill_number	Expenses categorized into 8 retail heads. WhatsApp direct deep-link logs preserved for audits.

4. Core Retail Engines & Business Logic Deep Dive

4.1 5-Rule Configurable Surcharge & MDR Calculation Engine

Dolly POS incorporates a multi-tier dynamic surcharge calculator located in frontend/src/utills/extraCharges.ts and backend/app/models/settings.py. Store owners can define up to 5 independent surcharge templates (e.g. 0.04% Online/MDR surcharge on bills > ₹2,000, fixed convenience fees, packaging fees):

- **Rule Condition Evaluator:** Supports ALWAYS, GREATER_THAN, GREATER_EQUAL, LESS_THAN, and LESS_EQUAL based on bill subtotal after item discounts.
- **Calculation Modes:** Supports PERCENT (e.g. 0.04% or 2%) and FLAT (e.g. ₹5.00 or ₹10.00).
- **Payment Mode Filter:** Automatically applies or skips charges depending on payment method (ONLINE, UPI, CARD, CASH, or ALL).
- **Zero-Charges Clean Bill Rule:** When no extra charges apply (or sum = 0.00), receipts and WhatsApp messages strictly omit the extra charges line without printing stray '0' characters.

4.2 Dynamic WhatsApp Bill Template Engine & Variable Substitution

The system formats thermal bills into clean, scannable WhatsApp text messages using frontend/src/utills/whatsappFormatter.ts. Store owners can customize the entire layout, header, greeting, item list, and footer via the Settings Studio using the following tags:

{shop_name}	Store brand name from settings	{bill_no}	Formatted bill number (e.g. BILL-0001)
{date}	IST billing date & time	{customer_name}	Customer name or 'Valued Customer'
{customer_mobile}	Customer 10-digit mobile number	{items}	Numbered itemized list with size & price
{subtotal}	Gross item total before discount	{discount}	Discount amount (if > 0)
{charges}	MDR / extra charges line (if > 0)	{total}	Final payable amount in ₹ INR
{payment_mode}	Paid via UPI / Cash / Khata	{upi_link}	Direct NPCI UPI payment deep link
{footer}	Store policy & exchange terms	{social}	Instagram handle & store website

4.3 Buying & Demand Planner with Quick Notes [F10]

Located in frontend/src/pages/ProcurementPlannerPage.tsx, the planner consolidates purchasing intelligence into 3 clear tabs: **Low Stock Buying Sheet** (auto-grouped by supplier with estimated order budget), **Buying Notes & Wishlist [F10]** (quick memo pad to record item name, quantity, description, and supplier for market trips), and **Customer Lost Demand Log** (records missing sizes/styles requested by walk-in buyers).

4.4 Perpetual Indian Festival Calendar & Custom Stock Leads

The Festival Calendar (backend/app/api/reports_router.py) projects exact lunar and solar festival dates (Diwali, Navratri, Eid, Janmashtami, Foundation Day) for ANY year from 2024 to 2075+. Store owners can add custom stock leads (e.g. Navratri \$
ightarrow\$ 'Colourful Dhoti kurta') with two persistence scopes: **This Year Only ({year})** or **All Years (Recurring perpetually)**, stored in StoreSettings.custom_festival_items.

5. Security, Access Control & Disaster Recovery

- **Role-Based Access Control (RBAC):** System supports two user tiers: OWNER (unrestricted access to P&L; reports, purchase cost prices, settings, user passwords, and data purges) and STAFF (restricted to POS billing, customer Khata entry, barcode lookup, and receipt re-printing).
- **1-Click Full JSON Snapshot:** Complete portable export of all 23 tables into a single encrypted JSON archive (DollyToys_CompleteBackup_YYYYMMDD.json) in <1 second.
- **Automatic 1st-of-the-Month Auto-Backups:** Upon opening the POS on the 1st of any month, a full background snapshot is automatically written to the configured backup folder.
- **Historical Date-Range Purge & 21-Word Security Authorization:** Allows safe purging of historical expired invoices/expenses (e.g. 2020-2023) to clear disk space. Requires typing DELETE or a 21-word cryptographic authorization key generated on-demand.

6. Hardware Interfacing & Thermal Printer Studio

Dolly POS supports all standard Indian retail hardware without proprietary driver locks:

Hardware Device	Supported Standards & Models	Configuration Parameters & Setup
POS Thermal Receipt Printer	Epson TM-T82, TVS RP3200, Posiflex, Star, Xprinter, NGX, Generic 58mm/80mm USB Thermal Printers	Width: 80mm (3-inch) or 58mm (2-inch). Direct USB / Windows Spooler. Supports ESC/POS raster and silent browser printing with auto cash-drawer pulse.
Barcode Sticker Label Printer	TSC TE244, TVS LP46 Neo, Zebra ZD220, Citizen, Godex, Xprinter XP-TT424B, Laser/Inkjet A4 sheets	Roll Sizes: 50x25mm (1-Up & 2-Up dual roll), 38x25mm, 50x35mm, 100x50mm carton tag, A4 24-Up & 40-Up grids. Direct TSPL / ZPL / HTML Canvas.
Barcode Scanner	Honeywell Voyager, TVS BSC101, Symbol LS2208, Zebra, Datalogic, 1D/2D Wireless Bluetooth & USB Scanners	Operates in standard USB HID Keyboard Wedge mode with auto-focus buffer (<5ms item lookup on [F1] Billing).
Electronic Cash Drawer	Standard RJ11 / RJ12 24V Kick-out Cash Drawers	Triggered via ESC/POS pin 2 / pin 5 pulse code \x1b\x70\x00\x19\xfa upon bill completion.

7. New Laptop Setup & Offline Deployment Manual

To deploy Dolly POS on any fresh Windows 10/11 laptop (64-bit) in less than 2 minutes without needing active internet:

- **Step 1 — Copy Installer Folder:** Copy the dist_installer/ folder or run DollyPOS_Setup_Installer.bat directly from USB drive.
- **Step 2 — Run Setup Wizard:** Double-click DollyPOS_Setup_v1.0.0.exe. It installs all prerequisite runtimes (WebView2, Python runtime, Frontend bundles) and places a 'Dolly POS' desktop shortcut.
- **Step 3 — Database Initialization:** The app boots instantly using SQLite WAL mode. For multi-terminal setups, double-click Setup_PostgreSQL_Database.bat to configure PostgreSQL service.

- **Step 4 — Default Login Credentials:**
 - **Owner Account:** Username = admin | Password = somesh123 (Full Master Access)
 - **Staff Account:** Username = staff | Password = dolly123 (Billing Only Access)
- **Step 5 — Restore Store Data:** Go to *Settings* $\rightarrow$ *Backup & Disaster Recovery* and click *Import Full Backup (.JSON)* to restore all existing products, prices, barcodes, customers, and khata ledgers.

8. Engineering & AI Agent Maintenance Protocol

For future developers and AI programming agents modifying or enhancing Dolly POS, adhere to these architectural standards:

- **Preserve Surcharge & Round-off Parity:** Always ensure `extraCharges.ts` (client) and `invoice_router.py` (server) compute exact matching surcharge amounts and 50-paise round-offs.
- **Preserve Zero-Charge Aesthetics:** Never render stray '0' charges on receipts or WhatsApp messages when surcharges equal zero.
- **Database Longevity Rule:** Never run un-indexed text queries on products or invoices. Always leverage existing B-Tree and GIN trigram indexes.
- **IST Enforcement:** Never use `raw datetime.utcnow()` for business day cuts. Always use `get_ist_today()` and `get_ist_day_bounds_in_utc()` from `app.core.timezone`.
