

Dolly POS — Store User Manual

Standard Operating Procedures (SOP) for Dolly Toys & Kids Wear • Non-Technical Step-by-Step Guide

Welcome to Dolly POS! This manual is written for counter cashiers, store staff, and store owners. It provides crystal-clear instructions on how to use every screen and feature in the software without requiring technical knowledge.

1. Logging In & User Roles

Dolly POS supports two security roles:

- **Store Owner (Admin):** Has unrestricted access to Financial P&L, wholesale purchase costs, profit margins, master PIN configuration, and destructive database actions.
- **Counter Cashier (Staff):** Has high-speed access to Billing/POS, Returns, Customer Search, and Stock Lookup, while purchase cost prices and P&L; sensitive margins are masked for security.

How to Login:

1. Open the Dolly POS desktop app icon.
2. Enter your **Username** (e.g. admin or staff) and **Password**.
3. Click **Login to POS**. You will be redirected to the Main Dashboard or POS Billing Counter.

2. POS Billing Counter (Fast-Track Checkout)

The POS Billing screen (/billing) is engineered for 2-second barcode billing during rush hours and festival peaks.

Step-by-Step Billing Workflow:

1. **Barcode Scanning:** Place the cursor in the Barcode Scanner input box (or press F2). Scan any product barcode using the laser scanner. The product is added instantly with an audible beep sound.
2. **Manual Search & Speed Dial:** If an item lacks a barcode label, type its name, color, size, or 3-digit Speed Dial code (e.g., 101) in the search bar. Use arrow keys to select and press Enter.
3. **Quantity & Price Adjustments:** Click the + / - buttons or type directly in the Qty box. To give an item-level discount, edit the discount percentage or enter a negotiated counter selling price.
4. **Attaching a Customer:** Type the customer's 10-digit mobile number in the Customer box. If existing, their name, loyalty points, and Khata balance load automatically. If new, type their name to save instantly.
5. **Split Payments & Settlement:** Click **Pay & Print Bill (F10)**. Choose payment mode:
 - **Cash:** Enter Cash Tendered (e.g. ■500 for a ■320 bill). The change due (■180) is calculated automatically.
 - **UPI / QR Code:** Dynamic UPI QR code appears on screen for the customer to scan via PhonePe/GooglePay/Paytm.
 - **Split Payment:** Pay partial in Cash (e.g. ■200) and balance via UPI (■120).
 - **Khata (Udhar):** Customer due balance is credited to their ledger book with zero interest tracking.
6. **Print Receipt:** Bill prints on the 80mm / 3-inch thermal printer, and WhatsApp digital invoice is sent automatically.

3. Inventory & Barcode Label Printing

The Inventory Screen (/inventory) manages products, stock quantities, size variants, and barcode printing.

- **Adding a New Product:** Click '+ Add Product'. Fill in Name, Category, Size, Color, Purchase Price (Cost), Selling Price (MRP), and Opening Stock.

- **Barcode Generation:** Dolly POS auto-generates EAN-13 barcodes. You can also assign custom barcodes from existing factory tags.
- **Printing Barcode Labels:** Select one or multiple products, click **Print Barcodes**, choose label format (**1-Up 50x25mm** or **2-Up 100x50mm**), enter quantity, and click Print. The TSC barcode printer will calibrate and print crisp labels with Shop Name, Product Name, Size, Barcode, and MRP.
- **Low Stock Alerts:** Products with stock at or below minimum threshold highlight in bright amber so you can re-order in time.

4. Customer Khata (Udhar Ledger) & Loyalty

Manage store credit (Udhar) and recover outstanding balances with 1-click WhatsApp reminders from /customers.

- **Viewing Udhar Balances:** The Customer list displays Total Outstanding Credit in red. Click any customer to open their full statement.
- **Recording Udhar Payments:** When a customer pays due cash, click 'Collect Payment', enter amount received, and print a formal payment receipt.
- **WhatsApp Payment Reminder:** Click the WhatsApp icon next to their due balance. A polite WhatsApp reminder is sent with exact due amount and store UPI QR.

5. Vendor Purchases & Damaged Stock

In /vendors and /damaged-stock, track wholesale purchases, supplier bills, and defective merchandise.

- **Purchase Inward Entry:** Select supplier (e.g. Mumbai Wholesaler, Surat Textiles), enter Vendor Invoice Number, add inward items with cost prices. Stock is incremented automatically.
- **Logging Damaged / Defective Items:** If an item arrives damaged from vendor or gets soiled on display, log it in **Damaged Stock**. It is deducted from saleable inventory and queued for vendor debit note return.

6. WhatsApp Marketing & Birthday Automation

The Marketing module (/marketing) connects your store to customers with festival campaigns and automated birthday offers.

- **Festival Bulk Campaigns:** Send Diwali, Holi, Eid, or New Year discount coupons to all registered parents in 1 click.
- **Birthday Automation:** Dolly POS checks kids' birthdays daily at 9:00 AM and sends a sweet personalized greeting with a special 10% birthday discount coupon!

7. Financial Reports & P&L; Cockpit

The Reports module (/reports) gives a 100% transparent audit of store revenue, COGS, expenses, and net in-hand profit.

- **Gross Turnover:** Total invoice billing value across Cash, UPI, and Credit.
- **COGS (Cost of Goods Sold):** Exact wholesale purchase price of goods sold.
- **Operating Expenses:** Total shop overheads (Rent, Electricity, Staff Salaries, Tea/Snacks).
- **Take-Home Net Profit:** True net profit = Gross Margin – Overheads.
- **Excel Export (.xlsx):** Click **Export Sales Excel** to download full accounting spreadsheets.

8. Store Settings, Sound & Backup Security

In /settings, customize receipt headers, social media handles, audio beeps, and backup routines.

- **Sound Toggle:** Enable or disable the audio beep sound played when items are scanned into the bill.

- **Database Backup:** Click **Backup Database Now**. A JSON backup is saved to C:\DollyPOS_Backups. To restore on another machine, upload the file in **Restore Database**.
- **Test Print:** Test thermal bill receipts and 1-Up / 2-Up barcode labels before billing customers.
