

# Dolly POS — New Machine & Disaster Recovery Guide

## Zero-to-Hero Setup Walkthrough for Brand New Windows Laptop or System Recovery

This document provides complete, no-steps-skipped instructions to set up Dolly POS on a brand new Windows laptop or recover from a complete hard drive failure in under 15 minutes.

### Phase 1: Install Software Prerequisites

Install the following 3 programs on the new Windows laptop:

1. **PostgreSQL 16 (Database):** Download from <https://www.enterprisedb.com/downloads/postgres-postgresql-downloads>. During installation, set password to somesh123 (or your custom password) and port to 5432.
2. **Python 3.12+ (Backend):** Download from <https://www.python.org/downloads/>. **CRITICAL:** Check the box [X] Add Python to PATH before clicking Install.
3. **Node.js LTS (Frontend - Optional for developer mode):** Download from <https://nodejs.org/>.

### Phase 2: Create the Database

Open **pgAdmin 4** or **SQL Shell (psql)** and run the following command to create the database:

```
CREATE DATABASE dollytoyskidswear;
```

### Phase 3: Hardware Printer & Barcode Drivers Setup

| Hardware Device                     | Driver & Software                            | Configuration & Port                                     | TSPL / ESC Commands                                                               |
|-------------------------------------|----------------------------------------------|----------------------------------------------------------|-----------------------------------------------------------------------------------|
| <b>TSC Thermal Barcode Printer</b>  | Seagull Scientific TSC Driver (or BarTender) | USB Virtual COM / USB001<br>Darkness: 10<br>Speed: 3 ips | SIZE 50 mm, 25 mm<br>GAP 3 mm, 0 mm<br>CODE 128<br>File: printer_service.py       |
| <b>80mm Thermal Receipt Printer</b> | POS-80 Windows Thermal Driver                | USB001 / Raw Port 9100<br>Paper: 80 x 297 mm             | ESC @ (Init)<br>ESC a 1 (Center)<br>GS V 0 (Full Cut)<br>File: printer_service.py |
| <b>USB Barcode Scanner</b>          | Plug & Play HID Keyboard Device              | USB Port (Any)<br>Baud: Auto                             | Suffix configured with Carriage Return (CR / Enter key)                           |

### Phase 4: Clone Code & Run Automated Installer

1. Copy the project folder to the new laptop (e.g. C:\DollyPOS).
2. Double-click installer\Install-DollyPOS.bat.
3. The installer creates the Python virtual environment, installs locked packages from requirements.txt, and creates the Desktop shortcut.
4. Double-click the '**Dolly POS**' shortcut on your Desktop. The app will launch at <http://127.0.0.1:8000>.

## Phase 5: Restoring Shop Data from Backup

1. Login to Dolly POS as admin.
2. Go to **Settings (⚙️)** -> **Backup & Restore** tab.
3. Under **Restore Database from Backup**, click 'Choose File' and select your latest DollyToys\_CompleteBackup\_YYYYMMDD\_HHMMSS.json.
4. Click **Restore Database**. All products, customers, bills, purchases, and Khata ledger will be restored with 100% data integrity in under 2 seconds!

## Phase 6: Sensitive Credentials & Master Key Storage

### Where are credentials stored?

- **Database Password & JWT Secret:** Stored in backend\.env (or fallback defaults in backend\app\config.py).
- **Master Security PIN:** Configured in store\_settings table and verified in backend\app\api\auth\_router.py (Default Master PIN: 9999).
- **User Logins:** Encrypted with bcrypt in users table.

**Secure Backup Advice:** Keep a copy of your backend\.env on a password-protected USB drive or secure password manager (e.g. Bitwarden/1Password). Never upload .env to public GitHub.
